DETAILED ACTION

Claim Obj ctions

Claim 20 is objected to because of the following informalities: the term "computer" should be changed to "compute". Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by McCall et al. (US 6,321,984).

McCall et al. teach a method and system for adjustable price fuel dispensing, comprising:

Claim 1. At the server (204) (Fig. 8), having database storing data related to fuel transactions, calculating price based on said data related to fuel transactions in accordance with a predetermined pricing technique (column 8, lines 19-36; column 9, lines 2-4, 15-19);

at a client facility coupled to said server (204), permitting a user to enter said data related to a fuel transaction for processing and generating pricing data at said server (204) (column 8, lines 19-36);

permitting said fuel to be sold and distributed to a custmer based on said generated pricing data (column 8, lines 32-36).

Also, McCall et al. teach said method and system, wherein:

Claim 2. Said server (204) and the client facility are connected via the Internet (column 9, lines 15-19).

Claim 3. Use of the Internet inherently indicates use of standards based protocols.

Page 3

Application/Control Number: 09/895,011

Art Unit: 3629

Claim 4. Said server (204) includes a database (206) for storing said data related to fuel transactions (column 8, lines 23-25).

Claim 5. Said server (204) is configured to automatically generate said pricing data (column 8, lines 59-62).

Claim 7. Said client facility is remotely located from said server (204), and provides data to said server (204) for generating pricing data (column 4, lines 9-10, column 8, lines 26-28; column 9, lines 2-3).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over McCall et al.

Claim 10. McCall et al. teach all the limitations of claim 10, including calculating fuel price based on said data related to fuel transactions (column 8, lines 19-36; column 9, lines 2-4, 15-19); except that said calculation is implemented as a software module.

Official notice is taken that modular design is is well known in software designing, wherein a project is broken into smaller units, or modules, each of which can be developed independently.

Therefor, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify McCall et al. to include that said calculation is implemented as a software module, because it would allow to upgrade this software module in future without having to change all software, thereby keeping cost of the system maintenance down.

Claims 6, 9 and 11-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCall et al. in view of Narumo (US 2002/0099636).

Claim 6. McCall et al. teach said method and system, wherein said server (204) is configured to be accessed by a plurality of other clients (column 8, lines 26-28).

Application/Control Number: 09/895,011

Art Unit: 3629

However, McCall et al. do not specifically teach that said server (204) is configured to be accessed by a plurality of other clients simultaneously.

Narumo teaches a computerised method and system for stock investment timing, comprising a server and a plurality of clients, wherein the server is configured to provide access to as many clients simultaneously, as possible [0071].

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify McCall et al. to include that said server is configured to be accessed by a plurality of other clients simultaneously, as taught by Narumo, because it would be advantageously to allow said other clients to participate in the transaction without delay.

Claim 9. Narumo teaches said computerised method and system, wherein statisticals tools are used for pricing calculations [0007]; [0027]; [0031]; [0038]; [0042].

Claim 11. See claim 1 and claim 9.

Claim12. See claim 2.

Claim 13. See claim 3.

Claim 14. See claim 4.

Claim 15. See claim 5.

Claim 16. See claim 6.

Claim 17. See claim 7.

Claim 19. See claim 9.

Claim 20. See claim 10.

Claim 21. Ability of said client facility to access the server over the Internet in McCall obviously indicates providing a graphical user interface to said user of said client facility.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over McCall et al. in view of Nicholson (US 2001/0049626).

Claim 8. McCall et al. teach said method and system, wherein prices for fuel are calculated based on prior transactions (column 9, lines 2-4).

Art Unit: 3629

However, McCall et al. do not specifically teach that said prior transactions are fuel prior transactions.

Nicholson teaches a method and system for increasing fuel sales at a fuel service station, wherein if a customer purchases a predetermined amount of fuel, the customer receives a discount on future fuel purchase [0009].

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify McCall et al. to include that prices for fuel are calculated based on prior fuel transactions, as taught by Nicholson, because it would allow to stimulate customers to purchase more fuel in order to get a discount for said fuel, thereby increase revenue.

Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over McCall et al. and Narumo in view of Nicholson.

Claim 18. See claim 8 and claim 11.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure (see form PTO-892).

Any inquiry concerning this communication should be directed to Igor Borissov at telephone number (703) 305-4649.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Receptionist whose telephone number is (703) 872-9306.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's Supervisor, John Weiss, can be reached at (703) 308- 2702.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks Washington D.C. 20231

or faxed to:

(703) 872-9306 [Official communications; including After Final communications labeled "Box AF"]

Art Unit: 3629

Hand delivered responses should be brought to Crystal Park 5, 2451 Crystal Drive, Arlington, VA, 7th floor receptionist.
